REPORT NO.

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT 50 U.S.C. 31 AND 32, AS AMENDED. ITS TRANSMISSION OR THE REVELATION OF ITS CONTENTS IN ANY MANNER TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

1. A new finding of uranium ore is reported from Nova Ves pod Plesí (about 25 Km. NE of Příbram, Bohemia).* The main lode passes directly in the neighborhood of the sanatorium; it leads to Lécice and divides near Velké Chrástce. The left section continues to Lécice, the right one to Malé Chrástce, where it divides into further smaller sections leading into the vicinity.
2. According to Soviet experts these are very extensive findings with a radius of about 40 km., and the focus is directly under Mount Ples. Its depth is estimated at about 1000 to 1500 m.
3. The sanatorium at Ples is to be vacated as well as Malá and Velká Lécice, Zahorany, Nova Ves, Velká and Malá Chrástce.
4. The surface work has been started, and uranium ore amounting to 14 percent per ton at a depth of 10 to 20 m. of evacuation has been found. It is presumed that this is high quality ore (203-223). It is also expected that different isotopes of radium will be found.
5. The search is performed by 300 workmen and seven Russian engineers, of whom two are women.
